

Dear Sirs,

I believe after reviewing the information available that there is not adequate shielding to protect the licensed users on the high frequency amateur radio bands to allow both to operate without interference from EACH other. Please review all the data of which there seems to be plenty available, this reminds me of the choice to place CITIZENS BAND on eleven meters despite the protests that this would not work as outlined in the proposal and look at the mess now. This could be another communication disaster of the same caliber. Please go slowly and choose wisely, the current data could lead one to the conclusion that there are inherent flaws in the current plan that will not allow either one to communicate effectively by radio wave or powerline...

Thank You for your time and attention.

Eric Zierenberg
